

Perinatal Asphyxia

The aim of this book is to transmit the message that asphyxia is the major cause of infant mortality in the neonatal period. The sequelae of cerebral palsy; if mild, leading to MBD to seizures are all potential risks. It is important to make young physicians and nurses aware of this complication of the birth period, how to avoid it, and how to treat it. Facilitating such awareness is the chief purpose of this book. Alberto Lacoïus-Petrucelli New York 7 Contents
